

Work Experience

Business Analyst at Jaryq Lab — Almaty, Kazakhstan (remote, contract → on-site, full-time) **Nov 2025 – Jun 2026**

- Owned end-to-end delivery of a DNA-processing platform, stepping in as PM after the original left mid-project. Drove discovery, requirements, client coordination, and delivery, taking on design and QA beyond BA scope — zero production bugs at handoff
- Designed a single-source-of-truth spec system for AgrOS — a seven-app AgTech platform — ensuring consistent requirements across all apps. Authored the first app's spec across 17 sections, 59 screens, and 35 user flows
- Took over a US combat-sports app's 40-feature MVP spec mid-build — PM and BA both leaving, scope still unlocked; ran client discovery to harden it, deferring 12 features (STT, payments, in-app chat, and more) to protect timeline — client sign-off secured
- Flagged BA capacity as a cross-project bottleneck — built a case for two new hires and a QA-to-BA transition within one month
- Championed client-approved prototyping for BAs to enable design and dev-task writing in parallel off a locked baseline

Founder at Young Student — Karaganda, Kazakhstan (side project: Jan 2019–Mar 2024 → full-time) **Apr 2024 – Mar 2025**

- Founded and commercialized a university EDMS SaaS, closing the first enterprise contract directly with a university rector and tripling annual contract value at the 2024 renewal. The product remained in production for six years
- Owned the entire SDLC, shipping v1 in 80 days and scaling to 30,000+ applications and 2,500+ e-signed documents: 80% reduction in Student Service Center operating costs, eliminating the need for in-person office visits. Case study: bex.works/sqko
- Designed a visual no-code state-machine constructor that modeled services as configurable workflows — defining stages, transitions, UI, forms, documents, and signers on the fly, enabling a dormitory service deployment on a pulled-forward deadline
- Instrumented and backfilled Mixpanel analytics across the application funnel: registration, creation, processing, e-signing
- Team: converted a non-coder into a full-stack developer, recruited a mobile freelancer, and ran a summer developer internship

Lead Frontend Developer at Sequencing — Pasadena, CA, USA (remote, full-time) **Nov 2022 – Sep 2023**

- Led frontend development of Health Scan and Next-Gen Disease Screen — products critical to securing Series A funding — roadmapping, delivery estimates, and collaborating with the bioinformatics team on data structures and integration strategies
- Proactively identified UX and data issues — both in production and at the design stage — becoming the go-to for UX review across all products. Wrote tickets with full context and QA criteria — clear enough to build from without back-and-forth

Lead Frontend Developer at Blockchain & Big Data Lab — Almaty, Kazakhstan (hybrid, full-time) **Feb 2021 – Mar 2022**

- Delivered an outsourced CMS for Astana International Airport in 1.5 months — owning requirements, roadmap, tech stack, stakeholder coordination, and junior developer onboarding
- Championed the JavaScript-to-TypeScript migration across frontend teams; code reviewed and contributed to multiple projects

Mobile Developer at Silkway Labs — Karaganda, Kazakhstan (on-site, full-time) **May – Aug 2019**

- Audio-newsfeed cross-platform mobile app for a U.S. client — sole developer; 40+ screens with audio recording and playback
- Took over communication and delivery coordination with the U.S. client, freeing the in-house Scrum Master from the project

Education

Karaganda University of Kazpotrebsouz — Karaganda, Kazakhstan **Jan 2019 – Jun 2021**

- B.Eng. in Computer Software Engineering (transferred from Pusan National University); Academic Council Scholarship

Pusan National University — Busan, South Korea **Sep 2016 – Jun 2018**

- Coursework toward B.Sc. in Computer Science Engineering; Excellent International Students Scholarship

Programs & Courses

Strong Junior Product Manager — Product Masters (2024) · Accelerator (2024) & Incubator (2022) — Terricon Valley · Business Unit Analysis — Product University (2020) · Startup School — Y Combinator (2020) · Tech Central Asia Pre-Acceleration Program — NURIS (2019) · AWS Fundamentals (2019) — AWS · Piscine — 42 Silicon Valley (2018) · nFactorial Incubator (2018)

Skills

Product: Product Discovery, User Interviews, Market Research, BRD/PRD/FRD, User Stories & Acceptance Criteria, Prioritization, Roadmapping, Backlog Management, MVP, Proof of Concept, Scrum, Kanban, Unit Economics

Modeling: BPMN, User Flows, Wireframing & Prototyping, State-Machine Modeling, Single-Source-of-Truth Spec Systems

Tools: Jira, Confluence, Notion, Figma, Miro, Balsamiq, Postman, Mixpanel, Hotjar, GA, Sentry, Claude, draw.io, Mermaid

Engineering: TypeScript, Ruby, C, React, React Native, REST, GraphQL, WebSockets, SQL, Firebase, MongoDB, Git, Docker, AWS

Languages (fluent): English, Russian, Kazakh
