

Work Experience

Business Analyst at Jaryq Lab — Almaty, Kazakhstan (remote, contract → on-site, full-time) **Nov 2025 – Jun 2026**

- Drove a DNA-processing platform 0→1, owning discovery, requirements, client and dev coordination, and delivery; stepped in as PM when the original left mid-project and covered design and QA beyond the BA remit — zero production bugs to date
- Sole spec author for AgrOS, a seven-app AgTech platform on a shared backend — designed a single-source-of-truth spec system spanning all seven apps and locked the core product decisions that keep them consistent and traceable
- Took over a US combat-sports app's 40-feature MVP spec mid-build; ran client discovery to harden scope, deferring 12 features (STT, payments, in-app chat, and more) to protect the beta timeline — client sign-off secured
- Flagged that running multiple projects was capping delivery — prompting two hires and a QA-to-BA transition within ~10 days
- Advocated for BAs to provide client-approved prototypes — cutting designer rework and parallelizing effective dev-task writing

Founder at Young Student — Karaganda, Kazakhstan (side project: Jan 2019–Mar 2024 → full-time) **Apr 2024 – Mar 2025**

- Founded, built, and commercialized a university EDMS SaaS — registered the company and closed the first contract directly with the university rector; ran it in production 2019–2025 and tripled the annual contract value at its 2024 renewal
- Owned the entire SDLC — shipped v1 in 40 days, then scaled to 30,000+ applications, 2,500+ verifiable e-signed documents, 80% lower Student Service Center operating costs, and in-person office visits made obsolete; case study: bex.works/sqko
- Designed a no-code visual constructor modeling each service as a configurable state machine — stages, transitions, UI, forms, documents, signers — so services shipped without engineering, including a dorm service on a pulled-forward deadline
- Hired and trained the team — converted a non-coder into a full-stack developer (who shipped the document-generation microservice, then moved on to QA and backend roles elsewhere), recruited a mobile freelancer, and ran a developer internship

Lead Frontend Developer at Sequencing — Pasadena, CA, USA (remote, full-time) **Nov 2022 – Sep 2023**

- Led frontend development of [Health Scan](#) and [Next-Gen Disease Screen](#) — launches pivotal to securing Series A funding — roadmapping and executing precise delivery estimates, delegating to senior developers, and collaborating with the bioinformatics team on data structures and integration strategies optimized for client performance
- Proactively flagged UX and data issues, improved legacy code, and authored dev tickets with clear context and QA criteria

Lead Frontend Developer at Blockchain & Big Data Lab — Almaty, Kazakhstan (hybrid, full-time) **Feb 2021 – Mar 2022**

- Translated client needs into functional requirements, proposed roadmap, selected and defended the tech stack (including RTK Query at launch), led weekly briefings with stakeholders, coordinated with the client's backend engineer, and onboarded a junior developer on an outsource project — CMS for [Astana International Airport](#) — delivering the product in 1.5 months
- Championed the JavaScript-to-TypeScript migration across frontend teams; code reviewed and contributed to multiple projects

Mobile Developer at Silkway Labs — Karaganda, Kazakhstan (on-site, full-time) **May – Aug 2019**

- Audio-newsfeed cross-platform mobile app for a U.S. client — sole developer, 40+ screens with audio recording and playback
- Took over client and delivery coordination — becoming the project's de facto owner on a distributed international team

Education

Karaganda University of Kazpotrebsouz — Karaganda, Kazakhstan **Jan 2019 – Jun 2021**

- B.Eng. in Computer Software Engineering (transferred from Pusan National University); Academic Council Scholarship

Pusan National University — Busan, South Korea **Sep 2016 – Jun 2018**

- Coursework toward B.Sc. in Computer Science Engineering; Excellent International Students Scholarship

Programs & Courses

Strong Junior Product Manager — [Product Masters](#) (2024) · [Accelerator](#) (2024) & [Incubator](#) (2022) — [Terricon Valley](#) · [Business Unit Analysis](#) — [Product University](#) (2020) · [Startup School](#) — [Y Combinator](#) (2020) · [Tech Central Asia Pre-Acceleration Program](#) — [NURIS](#) (2019) · [AWS Fundamentals](#) (2019) — [AWS](#) · [Piscine](#) — [42 Silicon Valley](#) (2018) · [nFactorial Incubator](#) (2018)

Skills

Product & Delivery: product discovery, user interviews, market research, requirements (BRD/PRD/FRD), user stories, acceptance criteria, prioritization, roadmapping, stakeholder management, backlog refinement, MVP/PoC, Scrum & Kanban, unit economics
Tools: Jira, Confluence, Notion, Figma, Miro, Balsamiq, Stitch, Postman, Mixpanel, Hotjar, GA, Sentry, Claude, draw.io, Mermaid
Engineering: JavaScript, Ruby, Java, C; SQL, MongoDB, Firebase, SQLite; REST, GraphQL, WebSockets, SSE; Git, Docker, AWS
Languages (fluent): English, Russian, Kazakh
